

Assemble the base following the main bed installation guide.

The two sides have a batten at the foot end for the Drawer to sit on.

The Drawer carcass is pre-assembled with the drawer in it. Remove the drawer

Place the drawer carcass on the floor inside the base, back from the battens with the angled corner cuts at the foot end.

Lift one side of the carcass and then the other above the height of the battens.

Push the carcass towards the drawer opening and down onto the three battens ensuring there is no gap between the carcass and the foot end panel.

Secure the carcass using a 20mm screw through the brackets on each side

Insert the drawer by sitting the wheels of the drawer runners on the carcass runner then lift the drawer front and push back. To close

The drawers have a tidy finger pull at the bottom edge and the drawers self-close when pushed in.
