

Castors

On our Serena range of adjustable beds we use strong twin castors with brakes which makes it easy to move your adjustable bed. Simply flick the small brake lever up to unlock, reposition the adjustable bed and push the brake down to lock it.

Our castors have a load capacity of 50kg per castor in comparison to general quality castors that have a rating of 30kg. A 10mm thread into a steel insert, which is threaded into a hardwood corner post.

Wooden Feet

Our Majestic range comes with wooden feet with a felt pad to protect the floor. Adjustable beds are not particularly heavy and can be moved relatively easily however if you need to move the beds regularly and will find it difficult it may be a good idea to pay a little more to upgrade to have castors.
